

## Casabox S7170

### Cassette awning with folding arms

The Casabox is the ideal box awning for balconies and terraces wherever smaller dimensions and elegant design are required.

The elegant rounded form with a construction height of only 15.5 cm is especially designed for places where a larger awning would be too bulky. The pleasing design of the Casabox sets new standards.

As with the Tendabox, the fabric and mechanism are protected in the tightly closing box against the weather and dirt.

The Casabox can also be operated by a crank – or more comfortably with an electric drive.

Its high standard of technology, a maintenance-free mechanism and the powder-coating of the whole construction guarantee a long life.
